

Laser Treatment of the Cervix, Vagina or Vulva

Information after laser treatment of the cervix, vagina or vulva.

General care

- You may have light bleeding, less than a menstrual period, for about 2 weeks.
- If you have pain, you may take an analgesic such as paracetamol. Avoid aspirin and other acetylsalicylic acid products.
- If the vulva was treated, wash as recommended and apply the creams prescribed by your doctor. Avoid tight trousers and wear cotton underwear.
- Light rest is recommended during the first week after treatment.

For the 3 weeks after treatment

- Do not have sexual intercourse.
- Do not use vaginal tampons.
- Do not douche.
- Do not take an immersion bath. Shower only.

Contact the clinical team if you develop

- Fever.
- Severe abdominal pain.
- Vaginal bleeding.
- Discharge with a strong odour and itching.
