

Elective Electrical Cardioversion

Information and care after elective electrical cardioversion.

Care after the examination

- You may resume your usual diet unless you have been instructed otherwise.
- Gradually resume your daily activities.
- Continue your anticoagulant and other medication until instructed otherwise by your doctor.
- For the first few days, take things slowly, avoid physical exercise, and reduce psychological stress.

If the examination was performed under anaesthesia

- Do not drive or operate machinery for the next 24 hours.
- You must leave the hospital accompanied and rest at home for the remainder of the day.
- Do not work.
- Do not make important decisions, such as signing documents.

Signs and symptoms of complications

- Feeling faint or dizzy.
- Palpitations.
- Skin burns on the chest.
- Fever.
- Allergic reaction to medication.
- If you had anaesthesia, inflammation, pain, warmth, or swelling at the intravenous puncture site.

Contact details

If you notice anything unusual after the examination, contact the Special Examinations Unit on 967 776 921 or 210 025 255/0 on working days between 08:00 and 20:00. You should also contact your attending doctor or go to an emergency department.
